

DYNAMIZATION REGENERATES WATER BY RESTRUCTURING IT AND STORING ENERGY IN THE MINERALS IT CONTAINS

« Energy codes,
water encodes,
the Human decodes »

Christophe Carrette

“Any **conductive liquid** (water containing minerals) which is in **motion** (vortex) and which is exposed to **magnetic fields** (permanent magnets)) will create **electric currents with an electronegative charge** in them that will **ionize** the water”
(-> more electronic currents with electronegative charge which represent the energy in the water)

Dynamization therefore implies the application of 3 basic principles:

- **Vortices** (kinetic energy),
- **Permanent magnets** (photonic energy),
- **Minerals** contained in water (which makes it conductive)

THESE 3 BASIC PRINCIPLES OF DYNAMIZATION CONTRIBUTE TO:

- **Restructuring** water molecules
- **Generate & Store energy** in mineralized water

The **qualitative advantages of dynamized water:**

- ↗ **energy** (= in terms of photonic light, in intensity & amplitude)
- ↗ **cellular hydration** (lower surface tension)
- ↘ **oxidized** (lower redox potential because there are more available electrons to fight free radicals)

This will promote:

- **Metabolizing nutrients**
- **Cellular detoxification**
- The **evacuation of metabolic waste rather via the stools** than the kidneys (the ionic form of minerals is transformed into colloidal form)
- The **fight against cellular aging** (thanks to the surplus of available electrons)
- **Pulverizing limestone** into a white powder that cleans easily

DRINK BETTER! FILTERED & DYNAMIZED TAP WATER :

- **A Global Solution** (treats water throughout the whole house. High quality water, for drinking, for showers and baths, and which also treats limescale)
- **An Ecological Solution** (0-km water, filtered and dynamized on site, with no carbon footprint, no water loss; No more need for water bottles or salt softeners)
- **An Economical Solution** (devices amortized in 4 years because city water costs 140 times less than bottled water)
