

DESCRIPTION OF THE BIOFILTER & BIODYNAMIZER

- **Filtration by the Biofilter: high-performance triple filtration**

Pre-filtration ①, activated carbon ② mixed with a fiber containing ionized silver ③ (adsorption surface 3,000 m²/g of activated carbon = 900 Ha, i.e. **33 times more efficient** than other activated carbon filters). The Biofilter will remove most of the pollutants that would still be present in city water (i.e. chlorine, bad tastes and odors, pipe corrosion, bacteria, organic pesticides, heavy metals, etc.) **while preserving its trace elements and minerals which are good for our health** (they participate between 20% and 50% of the Recommended Nutritional Intake of calcium and magnesium). Minerals are also essential for generating **energy** in water (conductivity) and storing it there! The exclusive **Bio Pro filtration cartridge** has a very broad filtration spectrum and has a filtration capacity of **150,000 L and a maximum of 1 year** (i.e. the annual consumption of a family of 5 to 8 people).

- **Dynamization by the Biodynamizer: regenerates water by biomimicry by *observing, understanding and copying nature* in order to recover the true nature of water, i.e. water comparable to mountain water**

Dynamization means **transmitting all the power of nature to each tap in your home**. In doing so, the Biodynamizer will **restructure** the water (from a molecular point of view), **pulverize the limescale** and **regenerate** the water (in terms of energy, hydration, oxidation) while giving it a soft and rounder **taste**.

The Biodynamizer **won the gold medal with the jury's congratulations at the International Exhibition of Inventions in Geneva in April 2025**, because it is the **most complete device on the market integrating 21 dynamization principles** and it is also with this device that we were able to **scientifically validate 100% the benefits of water dynamization!**

- **To produce dynamized water, 3 basic principles (100% natural) are necessary:**

- very rapid swirling movements of **vortices**,
- emission of **magnetic fields**,
- transmission of **natural mineral frequencies**

Biodynamizer®
Enjoy the natural movement of life

ADVANTAGES OF THE BIOFILTER & BIODYNAMIZER

- The benefits of dynamized water are the following:

- **More energy** (from a light-photon point of view), because it contains and emits more photons, which helps to make the metabolism work by **improving cellular nutrition** (by participating in the opening of ion channels which are voltage-dependent)
- **More (cellular) hydration**, because its surface tension is lower, which promotes detoxification of the body by facilitating the evacuation of metabolic waste
- **Less oxidized** (more reductive water which contains more available electrons), because its redox potential is significantly lower, which helps to better fight free radicals and cellular aging
- **Transforms the ionic form of minerals into colloidal form, facilitating the evacuation of non-absorbable minerals via the stool rather than via the kidneys** and thus avoiding overloading the latter

- **Dynamization is:**

- An **ecological solution**, because it is an alternative to softeners which release salt (150 Kg/year), to plastic mineral water bottles whose carbon footprint = +/- 150 Kg of CO₂/person/year, to reverse osmosis devices which reject > 1 L of water for 1 L of filtered water, and which produce artificial water (unstructured and without minerals, which makes the water minerophagous and devoid of energy). In addition, each house becomes a mini purification station because the water discharged into nature will have been previously filtered and dynamized.
- A **global solution**, the devices are placed after the water meter to filter and dynamize all the water in the house on site (= 0-Km water) : drinking, showers, baths etc... and this in a sustainable way (the Biodynamizer works mechanically without electricity, without evacuations and without maintenance or consumables), the Bio Pro cartridge of the Biofilter only needs to be changed once a year. The Biodynamizer treats also limescale in an eco-responsible way by restructuring and pulverizing it, making it harmless to your pipes and household appliances
- An **economical solution** because the devices filter and dynamize city water which costs 140 times less than bottled mineral water which allows the devices to be depreciated in 4 years!
