

Dynamization regenerates water by energizing and restructuring it and storing this additional energy in the minerals it contains

« *Energy codes,
Water encodes,
Human decodes* »

Christophe Carrette

*“Any **conductive liquid** (water containing minerals) which is in **motion** (vortex) and which is exposed to **magnetic fields** (permanent magnets)) will create **electric currents with an electronegative charge** in them that will **ionize** the water”*

Dynamization therefore implies the application of 3 basic principles:

- **Vortices** (kinetic energy),
- **Permanent magnets** (magnetic energy),
- **Minerals** contained in water (which makes it conductive)

These 3 basic principles of dynamization contribute to:

The **qualitative advantages** of **dynamized water**:

- ↗ **energy** (in terms of photonic light & in intensity) **& information**
- ↗ **cellular hydration** (lower surface tension)
- ↘ **oxidized** (lower redox potential because there are more available electrons to fight free radicals)

This will promote:

- **Metabolizing nutrients & cellular detoxification** (thanks to the excess of electronegative charge of dynamized water which generates a difference in membrane voltage which activates the opening of the ion channels)
- Transformation of **inorganic minerals** into **colloids** which should facilitate their **metabolism** as well as their **evacuation** rather by the stools (intestinal) than by the urine (kidneys) and avoid overloading them
- Increased **oxygen in the blood** (promotes physical abilities)
- The **fight against cellular aging** (thanks to the surplus of available electrons)
- **Pulverizing limestone** into a white powder that cleans easily (thanks to the restructuring of calcite into aragonite)

Drink better! Filtered & dynamized tap water :

- **A Global Solution** (treats water throughout the whole house. High quality water, for drinking, for showers and baths, and which also treats limescale)
- **An Ecological Solution** (0-km water, filtered and dynamized on site, with no carbon footprint, no water loss; no more need for water plastic bottles or salt softeners)
- **An Economical Solution** (devices amortized in 4 years because city water costs 150 times less than bottled water, after a saving of +/- €1,250/year!)
